SAM IO[®] TRAINING KITS

ENGINEERED FOR SUCCESS

SAM IO[®] TRAINING KITS: A VERSATILE WAY OF TRAINING

The SAM IO[®] Training Kits include components needed to simulate intraosseous access with the SAM IO[®] system. Every kit includes a nylon Training Case, Driver, three Training Needles, Stabilizer, Adaptor and Extension Tubing. Simulation Sawbones, including the proximal humerus, proximal tibia, and distal tibia, are also available in the SAM IO[®] Training Kits. All included parts are for training purposes only and not for clinical use.

FEATURED TECHNOLOGY

MANUALLY OPERATED DRIVER

SAM IO[®] is a manually operated intraosseous access system. Catheter placement is achieved by continuously actuating (repeatedly compressing) the driver's trigger assembly while gently guiding the needle assembly into position. Repeated, full trigger actuation creates rotational spin of the needle assembly which, when combined with gentle downward pressure, results in controlled SAM IO[®] needle placement.
